Note:

1. Test frequency : 100KHz /1.0V.
2. All tested at 25°C ambient.
3. Testing Instrument (or eq.): Agilent 4284A,E4991A,4339B,KEYSIGHT E4980A/AL,chroma3302,3250,16502.
4. Heat rated current (Irms): current that cause temperature to rise approximately Δ T of 40°C.
5. Saturation current (Isat) : current that cause L0 to drop approximately 30%.
6. The part temperature (ambient + temp. rise) should not exceed 165°C under worst case operating conditions. Circuit design, PCB trace and thickness, airflow and other cooling conditions all affect the part temperature. Part temperature should be verified in the end application.
7. Irms Test : temperature rise is highly dependent on many factors including pcb land pattern, trace size, and proximity to other components. Therefore temperature rise should be verified in application conditions.
8. Rated DC current: the lower value of Irms and Isat.
